Report format

20 hours ago

You can format your report in any appropriate style but the citations and references MUST be in the correct IEEE format . That is, the report does *not* have to be in IEEE journal format, but the citations and references MUST use the correct IEEE format for each type of reference (book, article, proceedings, on-line, etc.).

The primary reason to point students to the journals is to get students to realise this is a research piece and *everything* they argue has to be backed up with correctly formatted IEEE-style references. Another reason is so students can see that you can't just quote everything (there's no academic merit simply quoting the work of others) but students must critically analyse the sources they are using.

The format is not important but the structure is!

The mandatory structure was given as:
Structure template:
• Abstract (~100 word summary of report)
• Introduction
• ... (main content, headings as appropriate)
• ...
• ...
• Conclusions
• References

The internal structure is required to be "appropriate" – i.e. a logical flow in sequence from beginning to end.

I hope that helps.

Reply

Lecture Notes

The first half of the lecture was a review of the In-Class Quiz (see Lecture Recordings under Learning Resources in Blackboard).

The second half of the lecture was on physical security by Aaron Whittaker from Microsoft (see Lecture Recordings and separate PDF).
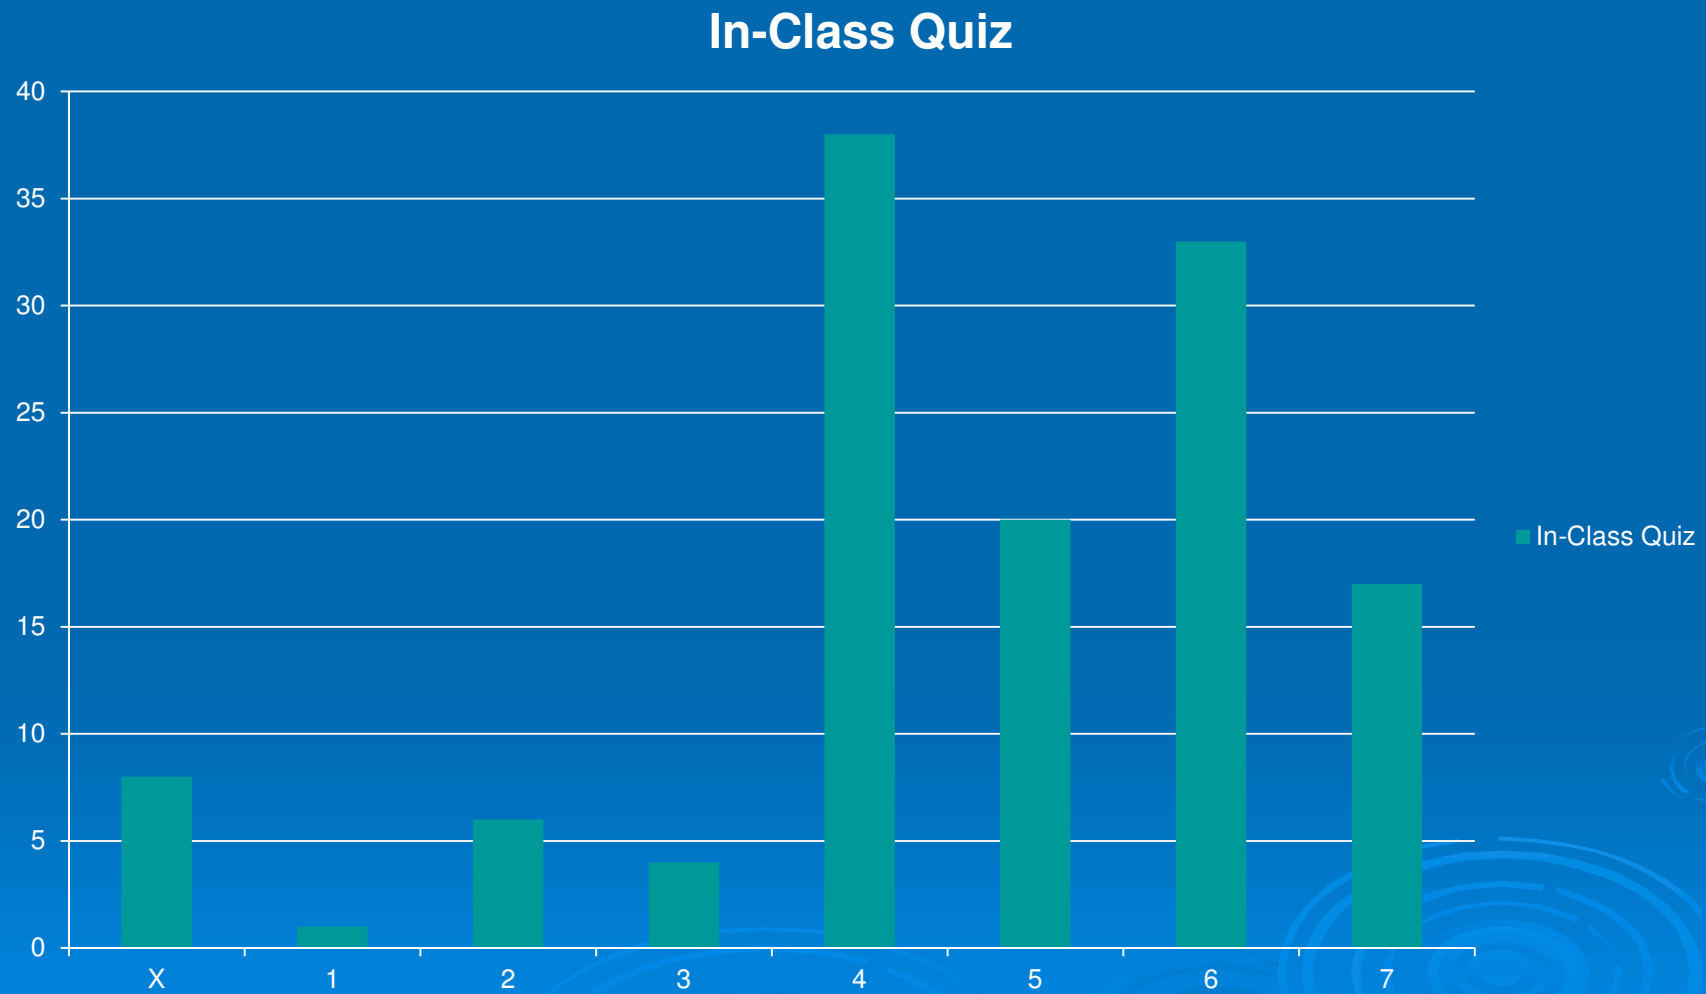

Remember all material (including guest lecturers) is examined (unless specifically stated otherwise).
